

**What are the techniques used ?**

**1**

**Baby  
circumcision**

The **Plastibel** technique is used for babies circumcision up to 3 months. It involves putting a ring on the child's penis that will fall off within 15 days of the operation. \*With local anesthesia

**2**

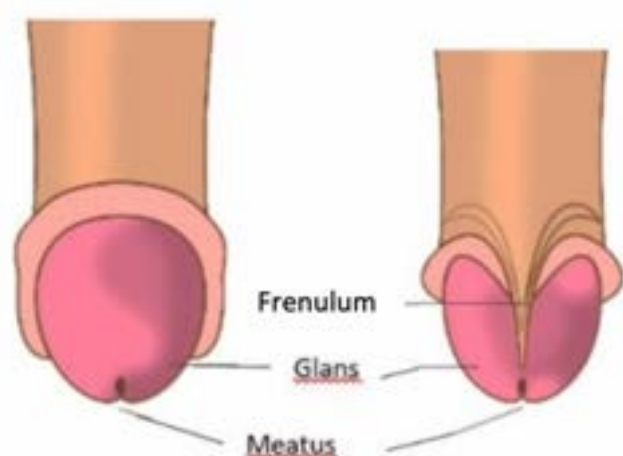

**Adult  
circumcision**

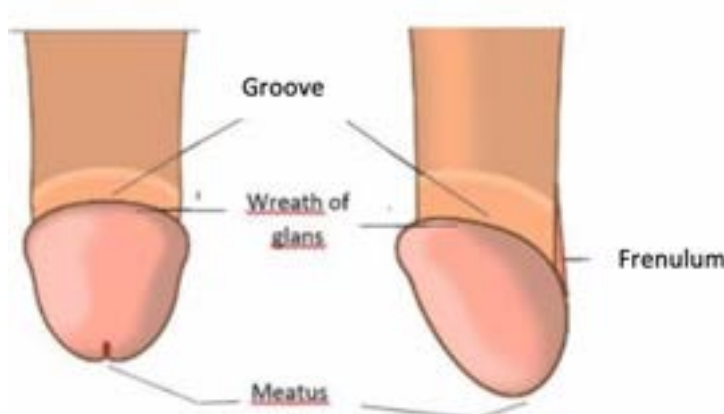

- The basic technique for adults is the use of stitches. \*With local anesthesia
- The **glue** can be used in addition to **stitches** for better esthetic results. \*With local anesthesia

**What is the difference before & after the circumcision?**

**Uncircumcised penis**

**Circumcised penis**
